

## Personal Summary

Product Designer with 3+ years delivering research-led digital products across the UK and China. UCL MSc Human-Computer Interaction, Distinction. Experienced across the full arc from problem framing and UX research through to system design, experimentation, and production handoff on web and mobile.

Strongest in conversion-critical environments: doubled checkout CVR and reduced cart abandonment by 50% at Depology through a full-funnel mobile commerce system built from heatmap diagnosis to developer handoff. Currently shipping across three international platforms at TUTU VIEW, owning IA, component systems, and AI-assisted delivery workflows that cut production labour by 70%.

Bring a T-shaped profile: deep in product design and UX systems, broad across growth, media performance, behavioural research, and cross-functional delivery. Comfortable working at the intersection of user behaviour and business outcomes, translating research signals into product decisions that engineering can build and stakeholders can commit to.

Research contributed to ACM CHIWORK '25, presented in Amsterdam and pitched to Google via UCL Interaction Centre. Property-tech search engine UX, StairAid ergonomic crutch published on Dezeen, and full work available in portfolio.
