Current interview activity: first-round Product Design process with Rightmove.

SUMMARY

Product Designer trained at UCL (MSc Human-Computer Interaction, Distinction), with 3+ years shipping research-led product experiences and design systems across UK and China. Experienced in Figma libraries, design tokens, reusable patterns, documentation, usability testing, WCAG-aware design, and AI-assisted prototyping. Full lifecycle from discovery to delivery, with design systems adopted across cross-functional teams, 2x checkout conversion, 40% faster feature design cycles, and 30% reduced design-to-build time, SaaS dashboard architecture via Worldover.io, and property-tech search engine UX. Research contributed to ACM CHIWORK '25.

EXPERIENCE

Product Designer, Design Systems TUTU VIEW, London Jul 2025 - Present
Sino-British business consultancy with two live consumer ventures across UK and China.

- Owned end-to-end design and launch of 3 cross-border digital platforms; led design system and brand guideline ownership across travel and education verticals, including a live mobile visa-checker app in production, applying ecosystem mapping across touchpoints.
- Built a shared multi-brand design system in Figma, Framer, Webflow, and Vercel with 30+ reusable components, variants, and design tokens across 3 brands; cut per-feature production time by 40%.
- Translated user needs into UX flows, prototypes, components, and team-wide SOPs using Claude Code, Codex, and Figma MCP; reduced design labour by 70% with well-detailed, collaboration-ready files for content managers and developers.
- Conducted customer behavioural analysis in collaboration with product and engineering stakeholders, applying human-centred design principles to define IA, reusable UX patterns, and product structures; secured founder buy-in to inform system decisions and roadmap.
- Implemented WCAG accessibility standards across UX-optimised landing page patterns; ensured North Star UX vision alignment across all media funnels set by key creative leadership, contributing to 1,500 followers and 220,000 likes in month one.
- Pioneered UX simulation framework using 400+ AI-generated user personas; evaluated outputs against usability heuristics to surface friction at scale across product and system decisions.
- Directed digital touchpoints and live technical production for high-profile Sino-British private receptions; mapped and executed event UX, brand presence, and production-ready visual assets with full integrity.

Product Designer, Design Systems & Conversion Depology, Shenzhen Dec 2024 - Jun 2025
Seoul-founded Korean skincare DTC brand; Shenzhen branch driving digital product and growth.

- Built a modular Figma design system with tokens, component documentation, and handoff SOPs; reduced design and build time by 30% and scaled across a 5-person cross-functional team.
- Doubled checkout CVR (+100%) across two product rollouts through a user-centred full funnel redesign, using heatmaps, session recordings, and cohort data to remove the highest-impact drop-off points.
- Created a Research-UI-Ads usability testing and A/B framework within an Agile sprint that cut testing cycles from 2 weeks to 4 days.
- Improved cart abandonment by 50% through research-led redesign of product, cart, and checkout interactions.
- Led UX prioritisation aligning design, media buying, and technical implementation around conversion goals; aligned landing-page UX, component usage, ad promise, and user behaviour data throughout.

User Experience Designer Travel to Qin, Shenzhen Aug 2024 - Dec 2024
CITS-backed travel-tech startup; CITS is China's largest state-owned travel enterprise.

- Conducted mixed-methods research via interviews, focus groups, and field studies; synthesised findings into a 50-page IA wireframe that defined navigation UX, information hierarchy, and reusable patterns across a mobile travel app, informing expansion strategy.
- Architected reusable UI layouts and component-ready handoff across Shopify and WordPress from zero; built a product-uploading system that reduced launch cycle by 50% through standardised content templates and documented production workflows.

Digital Product Designer (Part-time) DAUH UK (manila.design), Leeds Oct 2022 - Sep 2023
Independent industrial and brand design studio; co-venture of manila.design (UK) and Cover (China).

- Built a design system standardising UI patterns across 15 product surfaces; reduced developer build time by 30% through component documentation, spacing tokens, and structured handoff files.
- Diagnosed 7 conversion blockers via Google Analytics and SEMrush behavioural analysis; redesigned checkout and product detail flows with pixel-perfect, developer-ready handoff ensuring zero quality loss in production.

UI Design Intern, Enterprise UI Quadtalent Technology, Shenzhen Apr 2021 - Sep 2021
Gaorong Ventures-backed Shenzhen big-data firm (200–500 staff); enterprise clients included Malaysian government agencies, Chinese manufacturing plants, and insurance enterprises. Founded by ex-Alibaba and Huawei leadership.

- Assumed sole UI ownership mid-project; self-taught Figma, CSS, HTML, and JavaScript in 3 days under live project pressure; shipped 15-page enterprise website with minimal engineering revision across multi-layer government and enterprise approval cycles.
- Designed and delivered 12 Python-generated data visualisation components for C-suite (ex-Alibaba and ex-Huawei leadership) presentations, applying consistent visual language and data hierarchy for executive decisions.

EDUCATION

MSc Human-Computer Interaction (Distinction, 76/100) University College London (UCL) 2022 - 2023
- Modules: Interaction Design (83), Perception and Interfaces (82.9), User-Centred Data Visualisation, Interaction Science.
- Research contributor to ACM CHIWORK '25 paper presented in Amsterdam; pitched findings to Google via UCL Interaction Centre.

BSc (Hons) Product Design (First Class, 71/100) University of Leeds 2019 - 2022
- Modules: Advanced Electronics (92), Understanding Data in Social Sciences (80), Interface Design, Service Design, Human Factors.
- Thesis: StairAid ergonomic crutch with novel stair-climbing mechanism, manufacturing analysis, and IP review. (72/100).

SKILLS

Design Systems: Figma Libraries / Variables and Tokens / Component Variants / Pattern Libraries / Usage Documentation / Handoff SOPs / Design QA
Research and Validation: User Interviews / Usability Testing Tools / Heuristic Evaluation / Journey Mapping / Heatmapping / A/B Testing / GA4 / Hotjar / Clarity
Accessibility and UX: WCAG 2.2 / Inclusive Design / Interaction Design / Information Architecture / SaaS UX / Mobile UX / Heuristics / Journey Mapping / Service Design
Tools and AI Build: AI-Assisted Prototyping (Claude Code, Codex, Figma MCP) / UX Simulation / Webflow / HTML / CSS / JavaScript / Dev Handoff / EN-ZH Bilingual / Git / CI/CD basics / Miro
